

A Closer Look at India's Leading NGOs

This report explores a dataset of 11 well-known Indian non-governmental organizations (NGOs), capturing details such as each organization's founder, headquarters, year founded, areas of work, key initiatives, and annual budget. To deepen the analysis, several supporting measures were added, including each NGO's age, budget ranking, share of total funding, and groupings by funding size and experience level. Together, these paint a clear picture of how charitable resources and focus areas are distributed across the sector.

The headline finding is straightforward: funding in this group is heavily concentrated at the top, with one organization commanding nearly 40% of the total budget, while the majority operate on far more modest means. Education emerges as the most common cause, and an organization's age turns out to have little bearing on its budget size.

Funding Is Highly Concentrated at the Top

- The combined annual budgets range widely, from just 2 Cr at the smallest NGO to 400 Cr at the largest.
- **Akshaya Patra Foundation** stands far ahead of every other organization, accounting for roughly 39% of the total budget across all 11 NGOs.
- The next tier — **Save the Children India (150 Cr)**, **Pratham (120 Cr)**, and **CRY (100 Cr)** — forms a clear group of large players, while the remaining organizations operate on noticeably smaller budgets.

NGO	Annual Budget (Cr)	Budget Rank	Budget Share (%)	Funding Category
Akshaya Patra Foundation	400.0	1	39.27	Very Large
Save the Children India	150.0	2	14.73	Large
Pratham	120.0	3	11.78	Large
CRY (Child Rights and You)	100.0	4	9.82	Large
CARE India	80.0	5	7.85	Large
Goonj	50.0	6	4.91	Medium
Smile Foundation	48.7	7	4.78	Medium
HelpAge India	40.0	8	3.93	Medium
Nanhi Kali	20.0	9	1.96	Small
GiveIndia Foundation	7.9	10	0.78	Small

InAmigos Foundation	2.0	11	0.20	Small
---------------------	-----	----	------	-------

The Average Masks the Reality for Most NGOs

- The median annual budget is 50 Cr, while the average is 92.6 Cr — a sizable gap driven entirely by the largest organization.
- This means a typical NGO in the dataset is much smaller than the average suggests, and most cluster in the Medium and Small funding tiers.

Age Does Not Determine Budget Size

- Founding years span from 1950 to 2020, covering both long-established institutions and newer entrants.
- There is no meaningful relationship between how old an NGO is and how large its budget is. For instance, CARE India is the oldest organization (founded 1950) yet ranks fifth by budget, while the much younger Akshaya Patra Foundation leads the field.
- This suggests funding size is tied more to operating scale and model than to longevity.

Education Is the Sector's Dominant Cause

- When areas of work are broken out individually, **Education** is the most frequently cited focus, appearing for 6 organizations.
- **Healthcare** and **Women Empowerment** follow, each cited by 3 organizations, pointing to a shared emphasis on human development and opportunity.

Where the Largest Organizations Are Based

- Grouping by headquarters, **Bengaluru** shows the highest average budget (about **204 Cr**), lifted by the presence of Akshaya Patra Foundation.
- **Gurugram** and **Mumbai/New Delhi** also rank highly on average budget, while **New Delhi** hosts the most organizations (4) at a more moderate average of around **55 Cr**.

Summary of Key Insights

This collection of 11 NGOs reveals a sector marked by sharp differences in scale. A single organization, Akshaya Patra Foundation, accounts for nearly two-fifths of the total funding, pulling the average budget well above what a typical NGO actually operates on. Education stands out as the unifying cause across these organizations, with healthcare and women's empowerment as strong secondary themes. Perhaps most notably, an organization's age offers little indication of its financial size — the largest players are not necessarily the oldest, signaling that operating model and reach matter more than tenure when it comes to funding.
